Organic Chemistry

What is Organic Chemistry?

The chemistry of carbon compounds (organic chemistry) has a long and rich history and continues to be a vibrant and dynamic field of research. Organic chemistry has evolved both as a core discipline and as an integral component of modern biology, medicine, materials science, and a host of other fields. Despite the expanding definition and influence of the field, the central mission of organic chemistry remains unchanged. Thus, the efforts of students within the organic chemistry area are squarely focused on the synthesis, characterization, and study of organic compounds, the understanding of structure, function, and reactivity, and the invention of entirely new reactions, processes, and properties.

I ILLINOIS Chemistry school of chemical sciences

Department of Chemistry University of Illinois at Urbana-Champaign

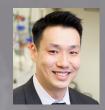

For more information, visit chemistry.illinois.edu

Martin D. Burke

Synthesis and study of small molecules with protein-like functions; molecular prosthetics; synthesis of complex natural products; iterative cross-coupling; MIDA boronates

chemistry.illinois.edu/mdburke

Jefferson Chan

Application of organic chemistry to develop pointof-care diagnostics and targeted therapeutics for cancer; synthesis of new chemical tools for non-invasive molecular imaging

chemistry.illinois.edu/jeffchan

Scott E. Denmark

The invention, development, and application of catalytic asymmetric organic reactions; elucidation of structure-reactivity-selectivity relationships employing spectroscopic, crystallographic, and computational methods

chemistry.illinois.edu/sdenmark

Paul J. Hergenrother

Using compounds derived from synthetic organic chemistry and natural products to explore biological systems; examples include the synthesis and evaluation of anticancer and antibacterial agents with novel modes of action

chemistry.illinois.edu/hergenro

Angad Mehta

Synthesis at the interface of chemistry and biology with a view to develop: (i) vaccine platforms for bacterial and viral vaccines and (ii) photosynthetic bioproduction platforms for semi-synthesis of important therapeutic molecules

chemistry.illinois.edu/apm8

Douglas A. Mitchell

Reactivity-based natural product discovery; complex molecule structural elucidation and derivatization; structure-activity relationships and mode of action determination of biomedically important compounds

chemistry.illinois.edu/douglasm

Organic Chemistry

Other faculty with interests in Organic Chemistry

Gregory S. Girolami Organometallic chemistry; catalysis

Mary L. Kraft (affiliate faculty) Biomembrane surface science

Yi Lu

Biocatalysis employing enzymes with unnatural amino acids or non-native cofactors

Liviu Mirica

Transition metal-catalyzed oxidative organic transformations

Ralph G. Nuzzo Functional organic materials

Eric Oldfield Antibiotics; anti-cancer drugs

Lisa Olshansky Synthesis and application of switchable ligands to support dual metal ion coordination geometries

Huimin Zhao (affiliate faculty) Natural product biosynthesis; synthetic biology

Jeffrey S. Moore

Organic materials including self-healing polymers; materials for energy storage; nanostructures; mechanochemistry

chemistry.illinois.edu/jsmoore

David Sarlah

Synthesis of complex natural products and the related chemical biology; methodology development; asymmetric catalysis

chemistry.illinois.edu/sarlah

Scott K. Silverman DNA as a catalyst

Wilfred A. van der Donk

Use of synthetic organic chemistry to address biologico problems; antibiotic synthesis is of particular interest chemistry.illinois.edu/vddonk

M. Christina White

Synthesis driven reaction discovery dedicated to the discovery and study of practical, selective catalytic reactions that streamline the synthesis and late stage functionalization of complex molecules; examples include site-selective C—H hydroxylations and aminations and asymmetric C—H oxidations and alkylations

chemistry.illinois.edu/mcwhitez

Steven C. Zimmerman

Organic synthesis of "smart" molecules, catalysts, and polymers to solve problems at the interface of chemistry and biology or chemistry and materials

chemistry.illinois.edu/sczimmer
