

We have a good deal of material on the course website. Before reading this document, visit the course website at (<https://chemistry.illinois.edu/clc/courses/chem-105>) where you will be able to view basic information.

Most importantly, find your one-page summary of due dates for all assignments throughout the semester. It is a good idea to print out the schedule—the due dates are set and late assignments will NOT be accepted.

Students must purchase Labflow for Chemistry 105 at <https://labflow.com>. Each student is required to have individual access to Labflow. It is not possible to share an account with another individual. Once you have purchased Labflow you will have access to the following documents: Course Policies, Safety Policies and Conduct and the Lab Manual.

Read through the material given on the course webpage, the course information on the link through the Chemistry Learning Center (CLC, (<https://chemistry.illinois.edu/clc/courses/chem-105>)) and Labflow (<https://labflow.com>). You will find general information, such as contact information of the Course Coordinator and Lab Director, the course material list, and links to Labflow online assignments and the Atlas gradebook.

Safety is very important in the Chemistry Laboratory. There are safety-related assignments, located in Labflow, under “Introductory Assignments,” that must be completed by each student before they will be permitted to gain access to the full course assignments in Labflow and attend Labs 0–11. These assignments are:

- Course Policy Assignment (available for completion starting the first day of the semester)
- Lab Safety Video and Lab Safety Quiz (available for completion starting the first day of the semester)
- Chemistry Annex Safety Scavenger Hunt (available for completion during Lab 0)
- Waste Disposal Activity (available for completion during Lab 0)

If these assignments are not completed after 4 Lab sessions (Lab 0, 1, 2, 3), the student will automatically fail the course.

Additional Introductory Assignment: There is one additional introductory assignment: the Practice Report with Provisional Data assignment. This assignment opens at 8:00AM on the first day of the semester. This assignment is not required in order to gain access to the course but is part of the student’s semester grade and thus should be completed. Students who do not complete this assignment by the due date will receive a grade of zero on any unanswered questions. This assignment is due at 11:59PM the evening before attending Lab 0.

For this class you will need the following:

- **Purchase Labflow** (UIUC, Chemistry 105, Spring 2024) from the following website: <https://labflow.com>. You will also receive detailed instructions on the course webpage and emailed by the Course Coordinator. We strongly recommend that students do not use the Labflow trial instead of purchasing Labflow at the start of the semester. Students who do use the Labflow trial are responsible for knowing when their

trial ends and purchasing Labflow before this time. Students will not be given extra time to complete assignments, without penalty, if their trial ends at the same time as an assignment is due.

- Register your UIUC email and create a passcode to access your account in Labflow. Using an email address other than your UIUC email (ending in @illinois.edu) may prevent your grades from properly uploading to the Atlas gradebook. Note that students may not share an account. Each student must purchase their own Labflow account access for the Spring 2024 semester.
 - VERY IMPORTANT: Students must know their section number (for example, X14) when they register their information with Labflow. If a student changes their section number, they must contact chem-105@illinois.edu to update their section in Labflow. Failing to update this information may result in missed assignments which will incur a grade of zero.
 - It is critical that students correctly enter their UIN when they register for Labflow. If they do not do this, then their grades will not be uploaded to the Atlas gradebook and their grade for Chem 105 will not be accurately reported to the University at midterms and finals.
- **Lab manual** – the Lab manual is provided in a digital format to all students within Labflow.
 - **Lab Procedures & Report Sheets** – students will receive a packet including all of the Lab procedures and Report Sheets for the semester during Lab 0. Students are required to bring these documents with them to the lab each week. Additional copies will not be provided. The handwritten completed Report Sheet(s), on printed pieces of paper, with the TA's handwritten initials (on each page), must be uploaded to Labflow. Failure to upload the Report Sheet(s) will result in a 1-point penalty on the Lab Report grade. Failure to obtain the TAs handwritten initials on each page of the student's printed Report sheet will result in a 1-point penalty on the Lab Report Grade. Students may use a blank sheet of paper (that they provide) if they lose their Report documents. Students may not record their data digitally into a pdf; recording data digitally into a pdf will result in a 1-point penalty on the Lab Report grade, just as when the TA's handwritten initials are missing.
 - **Goggles.** Students are required to wear the *Honeywell UVEX Stealth OTG safety goggles* in Chemistry 105. Alternative goggles are not permitted. In the instance when a student cannot fit the required goggles over their personal glasses, they can request an exception to use a different pair of goggles from the Lab Director. Students requesting this exception should email an image of their proposed goggles to sdesmond@illinois.edu.
 - **UIUC approved Laboratory coat.** Lab coats may be purchased at the bookstore. Students are permitted to purchase and wear either the standard white Lab coat or the blue, fire-resistant, Lab coat. It is recommended that students who plan to take upper-level (200-level and above) Lab courses purchase the blue, fire-resistant, Lab coats since this is the coat that will be required for several of those upper-level Lab courses.
 - **Wear the proper attire.** The full safety policy is found on pages Safety.1 to Safety.5 in the document *Laboratory Safety And Conduct* on Labflow.

REQUIRED ASSIGNMENTS TO GAIN ACCESS TO THE REMAINDER OF THE CHEMISTRY 105 COURSE MATERIALS

There are several activities that must be completed by each student before they may attend Lab this semester and gain access to the remainder of the assignments in Chemistry 105. All of these activities are found in Labflow and are described below. Failure to complete these activities will prevent the student from attending the lab session and will result in a zero for the missed Lab assignments (Report, Scan-In points, Cleanliness points, PostLab) for each session that the listed activities are not complete. After 4 lab sessions (Lab 0, 1, 2, 3) without completing any one of the activities listed below, the student will automatically fail the course.

- **Assignment 1:** Course Policy Assignment (available for completion starting the first day of the semester)
- **Assignment 2:** Safety Video and Quiz (available for completion starting the first day of the semester)
- **Assignment 3:** Scavenger Hunt (available for completion during Lab 0)
- **Assignment 4:** Waste Disposal (available for completion during Lab 0)

Students will have 5 attempts to correctly answer each question in the Course Policy Assignment and Safety Quiz. Students are encouraged to carefully read this document and watch the videos provided.

Due Date for Assignment 1 and Assignment 2: start time of the Lab 0 lab session.

Students who have not completed the Course Policy Assignment and Safety Quiz by the start of their Lab 0 lab session will not have access to Lab 0 to complete the Scavenger Hunt and Waste Disposal assignments during this lab period. These are required assignments that must be completed before a student is permitted to attend Lab 0 or any other Lab for the rest of the semester. Access to these assignments, after the Lab 0 lab session, will result in a 25% penalty on each assignment, even if every question is answered correctly. This is the penalty for failing to complete the required assignments by their due date. Students in this situation should email the Course Assistant at chem-105@illinois.edu to gain access to these assignments. It is the student's responsibility to contact the Course Assistant in a timely manner to avoid missing Lab 1 or additional assignments without penalty.

Penalty if Required Assignments are not completed by Lab 1 or subsequent Labs: Students who do not complete these assignments before Lab 1 will not be able to attend Lab 1 and will receive a zero on the Lab 1 assignments (Report, Cleanliness points, Scan-In points, PostLab). Students who do not complete these assignments by Lab 2 will not be able to attend Lab 2 and will receive a zero on the Lab 2 assignments (Report, Cleanliness points, Scan-In Points, Postlab). Students who miss Labs 0, 1, and 2 must complete these required assignments before Lab 3 in order to attend Lab 3 and remain in the course. If the student is unable to attend Lab 3 because they have not completed the required assignments, they will automatically fail the course.

****Additional Penalty information**** Students who do not attend Lab 0 AND obtain an excused absence per the guidelines under the "Attendance for the Course" section of this document (for example, they registered late, changed sections into a section that had already taken place, illness, etc.) should immediately contact the Course Assistant at chem-105@illinois.edu to resolve this situation and gain access to the required assignments before Lab 1. These students must complete all 4 required assignments before they will be permitted to attend Lab 1; however, there will not be a penalty for late access and completion of these required assignments. It is the student's responsibility to contact the Course Assistant in a timely manner to avoid missing Lab 1 or additional assignments without penalty. Failure to contact the Course Assistant in a timely manner may result in penalties.

If a student misses Lab 0 AND does not obtain an excused absence for that date, the student will be given the opportunity to complete the Scavenger Hunt and Waste Disposal Assignment (both listed as "Lab 0" on Labflow) before the next lab session, but each assignment will incur a 25% penalty, even if all questions are answered correctly. This is the penalty for failing to attend Lab 0 and failing to complete the required assignments by their due date. The student must still successfully complete these required assignments, listed above by the deadlines, to gain access to the remainder of the Chemistry 105 course in Labflow. Note, students who miss Lab 0, for a reason that is not excused, should immediately contact the Course Assistant (chem-105@illinois.edu) for access to the missed Lab 0 assignments. It is the student's responsibility to make this request in a timely manner. Failure to contact the Course Assistant in a timely manner may result in missed assignments for which the student will receive zero points for each one missed.

Welcome to Chemistry 105! This course is an introduction to the chemistry laboratory at the college level. You will complete eleven chemistry experiments in the laboratory designed to help you better understand the chemistry you are learning or have learned in Chemistry 104 or a similar course. You will do some deducing as you determine the identity, composition, or qualities of several systems or chemicals.

This manual is designed to help you on your way in Chemistry 105. Its aim is to guide you through the experiments you will undertake and help introduce you to several topics, techniques, and principles of chemistry. The experiments are intended to introduce you to laboratory work and it is our hope that you will find these laboratory experiences challenging and interesting.

Finally, we understand that our students are coming to us with different levels of experience in the lab. The Course Coordinator and Lab Director welcome your concerns and questions, whenever they arise throughout the semester.

Chemistry 105 Course Policies

You must read this section before coming to your first scheduled experiment.

CHEMISTRY 105

It is extremely important for you to familiarize yourself with the Chemistry 105 website. From this website you can access your assignment and experiment schedules and the online gradebook (in Atlas). You will complete your assignments this semester in Labflow, <https://labflow.com>.

We suggest you go to the website as soon as possible.

To access the course website, go to <https://chemistry.illinois.edu/clc/courses/chem-105>.

Click on the following links and familiarize yourself with them:

1. **Contact Information.** This page provides you with the office and contact information for the Chemistry 105 Course Coordinator and Lab Director.
 - For prompt email responses, it is strongly recommended that students email chem-105@illinois.edu for questions about the policies or the details of the course, Lab safety, to change their registered Lab section, requests for excused absences or extended assignments, unexcused missed Labs, and/or DRES accommodations.
 - Questions about midterm or final grades should be sent directly to the Course Coordinator.
 - Questions about specific content on assignments or calculations should be sent to the student's TA. If the TA fails to respond in 48 hours, these questions should be sent to the Course Coordinator. This email should include the date of the email sent to the TA as well as the handwritten work for any calculations or related graphs.
2. **Lab Schedule.** These pages provide you with the schedule for the semester for each section. The specific schedule depends on the day your lab section meets. Go to your particular meeting time schedule and print it out. You will then have the schedule for the date each lab meets, along with due dates for all online assignments.
3. **Labflow Assignments.** This link <https://labflow.com> allows you to access all online assignments. You will have to complete a PreLab assignment before each Lab, enter data during your lab session, and complete a PostLab assignment (which includes data analysis) after each lab. These assignments are described in more

detail in *Required Components of the Course* (next) and the due dates for these are given in the individual Lab Schedule for each day of the week. Clicking on the Labflow Assignments link will bring you to the login page for Labflow. Enter your UIUC email address as your login and the password you created when you purchased and registered for Labflow. The online assignments can be found on the initial page in Labflow after entering your information.

- The Introductory Assignments will be open starting 8:00AM the first day of the semester for all students.
- The Experiment Introduction information, Lab Procedures, Report sheets, and videos will be open for the entire semester, starting the first day of the semester.
- The individual assignments for each Lab will then open at their scheduled time for each section, each week - Please refer to the specific day of the week schedule for your section.

If you have problems accessing Labflow or technical difficulties during the semester, contact Labflow directly by emailing support@Labflow.freshdesk.com. Students may also create a help support ticket by accessing the form from the three-dot menu in the upper right-hand corner of the website, after logging into their account.

If the loading screen persists when using Labflow, the issue is usually resolved by clearing cookies/browser history. Students should also try resetting their Labflow access by entering: <https://labflow.com/reset> into their browser and then newly logging into Labflow.

4. **Online Gradebook.** This link takes you to the Chemistry 105 gradebook in the Atlas gradebook. This is the official gradebook for Chemistry 105 and provides you with scores for all Chemistry 105 assignments. Students should check this periodically throughout the semester to make sure their grades are entered correctly. Note, the Labflow gradebook is not the official gradebook for this course and should only be used to estimate ones grade. It does not contain all of the grades for Chem 105.

REQUIRED COMPONENTS OF THE COURSE

1. **PreLab Assignment.** These assignments have been developed to make sure you understand the concepts and the calculations involved in the Lab experiments. These are found online via Labflow and must be completed by 11:59PM the evening before the in-person lab session. It is important to note, the Pre-Lab Assignment is part of the graded assignments for Chem 105.

As a general rule, students will receive 2 attempts on all questions. Questions will not be reset and additional attempts will not be provided. If a student uses their allowed attempts without correctly answering a question, they will receive zero points for the question. Students are strongly encouraged not to guess on

questions and to seek assistance from their TA if they use 50% of their attempts without obtaining the correct answer.

Carefully reading the Lab manual and watching the videos in Labflow before completing each PreLab assignment will assist you greatly in being able to earn all possible points for the PreLab Assignments. Your PreLab Assignment must be completed before the due date, because once its deadline has passed, your access to the PreLab will be closed and this assignment will not be re-opened.

A student seeking to be excused from a PreLab Assignment must provide documentation that supports that they were unable to complete any of the questions in that assignment for the entire period of time that the PreLab Assignment was open.

Note: only one PreLab Assignment will be excused this semester, provided the proper documentation is submitted by the student seeking to be excused, no later than 2 weeks after the deadline of that PreLab assignment.

Additional information about PreLab Assignments in Labflow:

- Students will complete their first attempt on all questions at the same time. Answers are not submitted individually, for feedback, after each question. After attempting the assignment questions, the student will then be given the option to review each of their answers and return to complete any unanswered questions.
- After reviewing the selected answers, students will submit all 10 answers at the same time. At this time, the student will see their grade for attempt 1 and see which questions, if any, they answered incorrectly.
- Students will then be permitted to choose to attempt the PreLab Assignment for a second time. If a student chooses to attempt the assignment for a second time, they will receive 10 new questions to answer for this attempt.
- At the end of the student's second attempt, they will again have the option to review their answers and answer any questions that they may have skipped, before submitting their answers.
- After the student submits their second, and final attempt, they will see their grade for the PreLab Assignment as well as the date and time of the final attempt.
- The attempt with the highest grade will be transferred to the Atlas gradebook.
- When the assignment closes, at 11:59PM the evening before the student's scheduled lab section, any attempted but unsubmitted attempts will be automatically submitted. The student will receive a zero on any unanswered questions and the highest grade obtained for all answered questions. For example, if the student answered 8 of 10 questions correctly on their first attempt, but only 6 of 10 questions correctly on their second attempt, the student's final grade on the assignment will be 8 out of 10 points.

2. **Lab Assignments.** There are twelve labs (including Lab 0) throughout the semester (see the Lab Schedule

for the specific day of the week of your section). All lab data will be recorded into the provided tables on the Report Pages provided to the student, then recorded in Labflow. See *The Report Pages* section for more information.

You are required to attend all laboratory periods. During the lab session you will carry out the experiment, record your data (by hand) on your paper Experiment Report Pages, obtain your TAs handwritten initials (on each page), upload your completed Report Pages to Labflow, and record your data in your Labflow account. When you have completed the latter tasks, you are expected to remain in the lab space and complete as much of your PostLab as is possible with the remaining time. Students may only leave the laboratory early if their TA has verified that they have completed all the PostLab questions.

You are not excused from the Lab unless the reason falls under one of the categories described in

Attendance for the Course. Important points about missing the lab:

- Even if you are excused from a Lab, you must still complete the online PreLab and PostLab assignments by their regularly scheduled due dates and times. Students will be provided with provisional, or simulated, data to use in the PostLab. This data will be found in either sentence or table format within the Report. The student will enter the provisional data into the Report tables and use this data to complete any required calculations in the Report so that this information can then be transferred and used in the PostLab assignment; therefore, students are strongly encouraged to review the provisional data carefully before moving onto the PostLab assignment. Data that is entered incorrectly will not be accepted and will prevent the student from moving on to the Postlab assignment. Students will copy the provisional data onto their Report Sheet(s) and upload these Report Sheet(s) to Labflow, as is the standard procedure. The TAs initials are not required, since the Lab is completed remotely.
- If the Lab Report requires an image from the experiment to be uploaded, the excused student should do the following: write "I have an excused absence" on a piece of paper and upload an image of this piece of paper in place of the required image from the experiment. Students who receive provisional data for incomplete experiments may also use this procedure if necessary for required images of the experiment.
- Any student who misses more than 3 laboratory periods (excused or unexcused or any combination of the two) during the semester will automatically fail the course or receive an incomplete grade for the course if reasonable excuse letters have been provided.

You may be familiar with Labflow as a homework/quiz system. As such a system, Labflow automatically checks your answers and either provides you with immediate feedback, allowing you to change your answer, or accepts your answer and evaluates it after it is submitted or sometimes after the due date. Credit is earned based on the correctness of your response. For data entry it is a bit different because Labflow is not connected to a probe that gathers your data, so it has no way of knowing if what you enter is correct. You need to make

sure you are entering the correct data as it will be used for subsequent calculations in the PostLab.

- **In the lab, Labflow accepts answers that may not be correct.** That is, you may make an error in the lab and get a poor result and Labflow accepts it. This does not mean it is correct, even if accepted. In addition, you may measure a temperature as 25.2°C, for example, and enter it as 2.52°C. Labflow will accept it because there is no way to know that you entered the value incorrectly. In these instances, the student must correct the entered value before they submit their data and proceed to the PostLab. Data cannot be changed after this time. If the student does not change their answer before they proceed to the PostLab, they will use the incorrect value when answering PostLab questions. Additionally, it is important to note, we sometimes put ranges of acceptable answers (for example, we may only accept temperatures between 0°C and 100°C for aqueous solutions), but do not think that just because data are accepted that they are correct. Remember, Labflow does not know what you have measured and it is being used merely as a data entry tool.

- **Labflow requires acceptable answers to be entered into the online Report in order to move onto the PostLab Assignment.** Write your data, by hand, in the tables on your Report Page. Check to make sure what you have typed into Labflow is correct and consistent with what is on your Report Page before you hit the submit button. Your data should be the same in both Labflow and on your Report Page. If it is different you may be suspected of committing an act of Academic Dishonesty and will be subject to an investigation and appropriate penalties if deemed necessary. Additionally, you may lose points on the PostLab because of poor data, even if it was accidentally entered.

Lab Report points are earned for submitted data only. The Lab Report cannot be submitted with incomplete tables or unresolved errors. Students should pay close attention to any error messages provided by Labflow and correct those errors so they may submit their data and earn points for the Lab Report. If a student enters data into Labflow, but does not submit it for any reason, they will not earn any points for their data.

- **Labflow will provide feedback on the data entered.** Students are given 1 hour and 50 minutes to correctly complete the experiment. Students will receive some feedback from Labflow about their data while in Lab. For this reason, students are strongly encouraged to enter their data into Labflow before they leave the lab space. For example, if the significant figures entered for a measurement are incorrect, the student will be directed to correct their entry to include the correct significant figures before moving on; if the data entered does not make sense – i.e. the total volume of a precise titration is larger than that of an estimated titration – the student will receive an error message and is encouraged to repeat the portion of the experiment that is incorrect. Additional time is not provided to repeat the experiment, but students are encouraged to do so if time permits.

Data should be recorded in PEN. Student should never record any data in pencil. If a mistake is made when recording data, the student should cross through the incorrect piece of data with a single line and initial

next to it. The student should then write the new, corrected, data in the adjacent location on their Report Sheet. Data should never be erased from the Report Sheet. Erasing data, by any means, may be considered an act of Academic Dishonesty and may result in an investigation and appropriate penalties.

- **Write everything on your Report Pages.** Students should complete the calculations on the Report Pages, in the margins or in the provided boxes, so that if you have questions later, you can find the data you collected for each part of the experiment and recall what you did with it, especially when it was used for calculations during lab period. This will also help your TA review your work if you need help on calculations after the lab period has ended. As stated previously, the data on your Report Pages **MUST** match the data entered by you into Labflow. If the values in these two locations do not match, a student may be suspected of an act of Academic Dishonesty and will be subject to an investigation and appropriate penalties if deemed necessary.

- **Wait until you have gathered all of your data before submitting any data into Labflow.** If your results are inconsistent or obviously in error, you should repeat any trials as needed before entering data. Additional time is not provided to repeat the experiment, so students are strongly encouraged to diligently prepare for the Lab in advance so they will not make mistakes that must be repeated and do not lose valuable lab time.

- **For your PostLab to open, you must complete 2 tasks:**

- **You must enter accepted data** (that is, to the correct number of significant figures and within any ranges that are set). You will receive a message if your data is not accepted but be careful and take your time. Always double check to make sure your data is accepted. If your data is not accepted you must repeat those portions of the experiment to collect accepted data. If you are not able to do so during the lab period, and you wish to earn points for the Lab Report and complete the PostLab assignment, you will need to request provisional data, with penalty. More details on this process are found later in this section.
- **Your TA must scan the QR code on your Labflow Report before you leave the lab space.** Each report in Labflow will generate a unique QR code for each student. Students must enter at least one piece of data before the QR code will be available for the TA to scan. The PostLab will NOT open if your TA does not scan your QR code during the lab period. The QR code will not be scanned after the lab period ends. The QR code serves as a verification by the TA that the student has attended Lab in their registered room and at their registered time. If the TA does not enter their code, the student will not be able to open and complete the PostLab assignment, resulting in zero points for the PostLab assignment.

Labflow will display a green check mark when the QR code has been successfully scanned by the TA. Students should visually verify this green check mark is displayed before their TA leaves their personal device. Students are further required to ensure that their PostLab opens before they leave the lab space. If it does not, this will give the student an opportunity to resolve the situation before they leave the lab space. If the student does not check and resolve any errors before they leave the lab space, they will not be able to access or complete the PostLab later. This will result in a grade of zero points for this assignment.

• **Students must upload all of their handwritten Report Pages (on printed paper) to Labflow, with their TA's handwritten initials on each page.** Your TA will review your data and initial each of your Report Sheets. If a student fails to upload all of their Report sheets, they will receive a penalty of 1-point deducted from on their Lab Report grade. If you uploaded your Report sheets without your TAs handwritten initials (on each page), a 1-point penalty will be deducted from your Lab Report grade. Forging of your TAs initials, for any reason, is considered an act of Academic Dishonesty and will result in appropriate penalties.

• **If you experience a technical issue during lab,** take a screenshot of all messages and/or errors and have your TA call for help on the walkie-talkie immediately. Students should also immediately contact Labflow for assistance (support@labflow.freshdesk.com) and/or use the reset link (labflow.com/reset) provided by Labflow.

• **Students are expected to stay in the lab space for the entire lab period.** You may leave early only if you have completed the PostLab questions for the experiment. If you leave lab space early, as defined as before the end of the lab period, without the consent of your TA, we will assume you are committing Academic Dishonesty and you will earn a zero for the Lab Report and PostLab questions.

• **What happens if the student does not finish the lab during the lab period?** In rare circumstances, the student may not finish the experiment during the lab period. This is usually due to the student and/or their lab partner not completing the required preparation for that experiment before arriving to the lab space and so more than the allotted experimental time is needed to complete the experiment OR because the student, and/or their lab partner, made an experimental error, and it was necessary to correct this error in order to continue with the experiment or for the data to be accepted by Labflow.

In these instances, the student should complete as much of the experiment as possible. They should also still obtain their TAs initials (on each Report Page) and have their TA scan their QR code. The student should then email a copy of all of their Report Pages to the Course Assistant (chem-105@illinois.edu) and request provisional data to use to complete the Lab Report and access to the PostLab. This request must be submitted with 24 hours of the student's Lab section AND will incur a penalty of a 25% deduction (i.e. 25% of 30 points = a loss of 7.5 points) on the students final grade for the Lab Report and PostLab Assignment. Note, all

Report Pages for a given experiment must be sent with the student's request in order to receive provisional data. For example, if a Lab Report contains two report pages, but only one page is sent with the student's request for provisional data, the request will be denied because the student did not send all of the necessary information.

If a student chooses to obtain data from a friend or some other source, or fabricates data, in order to complete the Lab in time, the student's actions will be considered an act of Academic Dishonesty and appropriate penalties will be enforced.

• **What happens if the student collects data that is not accepted by Labflow?** In the instance that a student completes the experiment incorrectly and collects data that is not accepted by Labflow, the student may complete the following steps to obtain provisional data to use to complete the assignment: Upon completing the entire experiment, the student will obtain their TAs initials on each of their Report Pages and the TA will scan the student's QR code. The student will then email all of their Report Pages, along with a statement requesting provisional data because they were unable to collect acceptable data during the lab period, to the Course Assistant chem-105@illinois.edu. This request must be submitted within 24 hours of the students lab section and will incur a penalty of a 25% deduction (i.e. 25% of 30 points = a loss of 7.5 points) on the students final grade for the Lab Report and PostLab Assignment. Note, all Report Pages for a given experiment must be sent with the student's request in order to receive provisional data. For example, if a Lab Report contains two report pages, but only one page is sent with the student's request for provisional data, the request will be denied because the student did not send all of the necessary information.

If a student chooses to obtain data from a friend or some other source, or fabricates data, in order to complete the Lab in time, the student's actions will be considered an act of Academic Dishonesty and appropriate penalties will be enforced.

3. **PostLab Assignments.** These assignments consist mainly of calculations and data analysis of what you have completed in the lab space. The PostLab assignments are found online via Labflow and must be completed by 11:59PM the evening **before** your next Lab takes place (see the online Syllabus for the schedule). Before the deadline **3 attempts** are allowed. Questions will not be reset and additional attempts will not be provided. There is a penalty of 1% associated with each additional attempt beyond the first attempt. At the time of the due date, the final grade obtained on the Postlab is the grade the student will receive on the assignment.

For example,

- If a student correctly answers all the PostLab questions, they will receive 100% of the PostLab points.
- If a student enters significant figures or performs a calculation error during their first attempt, they will receive feedback alerting them to those errors. If the student then chooses to correct those errors,

and successfully answers each question during their second attempt, they will receive a 1% deduction in their final grade for the PostLab (i.e. they will receive 99% instead of 100%), even though all of the questions are now correct. The 1% deduction is the penalty for not correctly completing each question on the first attempt.

- If a student uses all 3 attempts, and on their third attempt answers all questions correctly, they will receive a 3% deduction ($1\% \times 3 = 3\%$) off their final score on that PostLab.
- Finally, if a student uses all three attempts, but does not correctly answer all questions, then they will receive the 3% deduction for attempting any part of the assignment 3 times **PLUS** they will lose points for any answer submitted that is still incorrect. Similarly, if a student only partially completes any attempt, but does not submit their answers, the attempt will be automatically submitted for grading at the due date of the assignment and any attempts or missed questions will be graded as zero when computing the student's final grade on the assignment.

Students are strongly encouraged not to guess on questions and to seek assistance from their TA or the Course Coordinator if they use 50% of their attempts without obtaining the correct answer. Once the deadline has passed, access to the PostLab assignment will be closed and will not be re-opened.

Students will not be penalized in Labflow for answering questions that rely on a previously entered incorrect answer. In these instances, Labflow will use the incorrect answer (from the previous question) to calculate the subsequent question's answer. Thus, if the student performs the calculation correctly, even though they used an incorrect previous answer, they will receive full credit for the question. It is important to note the following in these instances, if the student chooses to use an additional attempt and fix any errors with their PostLab answers, they must correct the answers for all steps in a multi-step calculation.

- For example, suppose student A answers question 3 **incorrectly**. The answer for question 3 is used in the calculation for question 4. The student uses the incorrect answer for question 3 and correctly performs the math functions involved in question 4.
- This scenario will be addressed by Labflow in the following way: Feedback is not provided until all answers are submitted together at the end of the student's completion of the assignment. At this time, the student will receive feedback that question 3 is incorrect. The student will notice that question 4 is correct. **IF** the student chooses to reattempt the PostLab assignment and correct the error, the student must correct **BOTH** questions 3 and 4, because the answer for question 4 relies on the **CORRECTED** answer for question 3.

All experiment data must be correctly entered and accepted by Labflow in order for the PostLab to open. Students should verify that their PostLab opens (by physically opening it while in the lab) before they leave the lab space. Experiment data cannot be re-entered or manipulated after the student proceeds to the Postlab, so all errors must be identified and corrected before the student submits their experiment data. Failure to correctly enter and submit experiment data will prevent the student from completing the PostLab and will

result in a grade of “zero” points for the PostLab. If a student enters a data value incorrectly (for example, 23.40 instead of 234.0), but it is accepted by Labflow, the student must use the incorrectly entered value to complete their Postlab assignment. Using a value that was not entered and accepted by Labflow will result in a loss of points on the Postlab assignment.

A student seeking to be excused from a PostLab assignment must provide documentation that supports that they were unable to complete any of the questions in that assignment for the entire time that the PostLab assignment was open.

Note: only one PostLab assignment will be excused this semester, provided the proper documentation is provided no later than 2 weeks after the deadline of that postLab assignment.

Other Labflow Assignments

There are 5 additional assignments in Labflow in addition to the PreLab Assignment, Lab Report, and Post-Lab Assignment mentioned above. These are:

- The Course Policy Assignment and the Safety Quiz: These two assignments are located under the *Introductory Assignments* in Labflow and open at 8:00AM on the first day of the semester for ALL students. Both assignments require that all questions are answered, for you to access and complete assignments in the rest of the Chemistry 105 course. More details on this are found in the *Required Assignments to Gain Access to the Remainder of the Chemistry 105 Course Materials* section of this document.
- The Labflow Practice with Provisional Data assignment: This assignment is located under the *Introductory Assignments* in Labflow and open at 8:00AM on the first day of the semester for ALL students. This assignment is a graded assignment that all students should complete; however, this assignment does not require completion to progress through the Chemistry 105 course this semester.
- The Scavenger Hunt and Waste Disposal Activity: Both are located in Lab 0 and will be completed during your first Lab session. These two assignments will become available to students at the start time of their scheduled Lab session. These are required assignments and must be completed to progress in the Chemistry 105 course this semester. Students who register late, switch into a section after it has taken place for the week of Lab 0, or do not attend for ANY reason, must contact the Course Assistant (**chem-105@illinois.edu**) immediately to gain access to these assignments. Failure to contact the appropriate person in a timely manner and complete the assignments by Lab 1 will prevent the student from attending Lab 1 and will result in a zero for those missed assignments. More details on this are found in the *Required Assignments to Gain Access to the Remainder of the Chemistry 105 Course Materials* section of

this document.

1. **Lab Cleanliness.** Students are required to work in a clean and orderly manner in the Lab space each week. Lab cleanliness is important throughout the lab period, not just at the end. The TA will continually assess the lab space. The lab space is also assessed by the Lab Staff when they walk through the space. These assessments include, but is not limited to, checking that benchtop area has been wiped down with soap and water; all used lab glassware has been cleaned with a brush and soap and water and returned it to its proper location; all lab equipment that you used (e.g. spectrophotometer, hotplate, etc.) have been left clean; all balances, and the surrounding benchtop area, are clean (Note, students should clean the balance immediately after each use. Dirty balances during the lab period will result in a loss of points); lids are replaced on chemical containers at the balances and in the dispensing station after use; spatulas are returned to the OAS after use at the balances; used weigh boats have been discarded in the trash; chemical waste has been disposed in the proper receptacle and any other lab cleaning requests made by your TA were followed during the lab period.

You will be given points, ranging from 0–1, based on the condition of the lab each week. These points will be assigned to the class as a whole, not to individual students; therefore, it is not only important that you leave your area clean, but that you also encourage those students around you to do the same.

1 points are awarded if the lab space is completely clean, and all conditions are met;

0.5 point is awarded if 1 or 2 of the conditions are not met; and

0 points are awarded if more than 2 of the conditions are not met.

In instances where poor student cleanliness results in the damage of lab equipment or controls, the Course Coordinator and Lab Director reserve the right to enforce a more severe lab penalty than the loss of Cleanliness points for the given week.

It is important to note that you and all persons in your section can earn the maximum amount of lab Cleanliness points for each experiment, if throughout the lab session you work together to make sure that spills are cleaned up as soon as they happen (this includes when or if you spill a chemical on the lab balance), you return used spatulas to the OAS bins after use at the balances, and making sure that you replace and tightly close lids of all chemical containers at the balances or in the dispensing stations.

It is not possible to earn Cleanliness points if you do not attend lab session. Students who receive an excused absence will be excused from the Cleanliness points for the missed Lab. Students who miss Lab, for an

unexcused reason, will receive zero Cleanliness points for the missed Lab.

2. **Policy for Broken Lab Glassware or Equipment.** Students will use a variety of glassware and equipment in the Chemistry 105 laboratory. This equipment is expensive and requires careful handling. Broken lab glassware or equipment will incur the following penalty: a loss of Cleanliness points for the week during which the breakage occurs. This penalty will be imposed on the individual student, not the entire lab section.

In instances where a student breaks glassware or equipment more than once, breaks lab equipment controls (for example the OAS, waste hood or dispensing station), or breaks equipment in a manner deemed potentially dangerous to other individuals in the lab, the Course Coordinator and Lab Director reserve the right to enforce a more severe lab grade penalty.

EXTENSIONS ON LABFLOW ASSIGNMENTS

The PreLab Assignment and PostLab Assignment in Labflow are each open, and available for students to complete, for seven days. Due Dates for individual lab section can be found in Labflow and on the course website link from the CLC website (<https://chemistry.illinois.edu/clc/courses/chem-105>). Due dates are set at the beginning of the semester.

In the instance when a student may require an extension on an assignment, the following steps should be followed. Students will be granted no more than **2 extensions** (one for a PreLab Assignment and one for a PostLab Assignment) during the semester based on their supporting documentation and the discretion of the Course Assistant (chem-105@illinois.edu).

Failure to complete any of the listed steps will result in the denial of an extension.

1. Extension requests must be sent to the Course Assistant at chem-105@illinois.edu, a minimum of 5 hours before the due date, i.e. before 6:59PM the day the assignment is due. Once an assignment has closed it will not be reopened and extensions will not be considered.
2. To qualify for an extension, the student must have completed at least one question in the assignment for which the extension is requested before submitting their request for an extension.
3. The student must provide detailed information for why the extension is needed, with supporting documentation, if possible, to the Course Assistant (chem-105@illinois.edu). This information should NOT be sent to your TA.

Students who have not completed any part of an assignment before the deadline of that assignment cannot qualify for an extension but may submit paperwork to be excused from that assignment. All students can be excused from one PreLab assignment and one PostLab Assignment, once they can provide documentation that supports why the assignment, that was open for one week, could not be completed over the entire period that it was open.

Waiting until the last minute to complete an assignment or forgetting a due date do not qualify as reasonable reasons for an extension to be granted and will not be considered.

Examples of reasonable requests, for significant lengths of time, for an extension include: hospitalization (for any reason), death of a family member or friend resulting in travel or University allowed time for grieving.

BONUS ASSIGNMENT

There will be one bonus assignment available to all Chemistry 105 students. This is a cumulative assignment, covering topics from all experiments and Labflow assignments assigned during the Spring 2024 semester. The bonus assignment is worth up to 30 points. The earned points will be added to the student's final point total at the end of the semester.

The bonus assignment will be available for completion in Labflow during the final week of the semester. The assignment is due at 11:59PM on the final day of the semester. This is an optional bonus assignment; therefore, extensions will not be provided for any reason.

Students must complete the bonus assignment individually. Feedback (i.e. information on whether a submitted answer is correct or incorrect) is not received until after the assignment closes. Since this is a bonus assignment, rewarding the cumulative knowledge gained by the student during the semester, students are not permitted to seek assistance/help in answering the questions in this assignment from other students, their TA, individuals in the Chemistry Learning Center, the Course Coordinator, the Lab Director, the Course Assistant, or any other source (for example, ChatGPT, Reddit, Google Chegg or any online help source). Students who violate this policy will receive appropriate penalties, such as the loss of any points earned on the bonus assignment.

ACADEMIC INTEGRITY

All responses submitted to the online administration systems, such as Labflow or any other, must only be based on individual effort under all circumstances. Any portion of submitted responses that matches either information previously made available, or answers submitted by other students will be considered plagiarized.

Specifics related to Labflow use in this course:

- Labflow Lab Assignment involves the entry of data collected by the individual student during the in-person lab session. For some experiments this work will be collaborative and the result of 2 lab partners working together; however, not for EVERY Lab. Students should carefully read the instructions at the start of every procedures and listen to the TA instructions at the start of the Lab to determine if work with a lab partner is permitted. Entering of any data into the Labflow Lab Assignment that was collected, recorded and evaluated by more than one individual

when individual work was required will be considered a violation of the student code and appropriate penalties will be enforced.

- Working with a lab partner is defined as working together on all parts of the experiment. Dividing the parts of the experiment, and working on them independently, then swapping data is not considered working with a partner and will incur appropriate penalties.
- The PostLab assignment, and in some instances the Lab Report when students work with a lab partner to complete the experiment, are intended to be collaborative, as defined as two or more learners working together to solve problems. Under this definition, students in this course may seek assistance from the Course Coordinator, the Lab Director, the Course Assistant, the Lab staff, or a Chemistry 105 TA (either their assigned TA or another TA for the Chemistry 105 course, for example in the Chemistry Learning Center).
- Collaborative learning in this course does not involve one individual providing answers to another individual, posting questions online, giving or receiving answers from online sources such as email, an online chat service or similar forums. Sharing or receiving information on paper, via text or other online platforms including, but not limited to, ChatGPT, GroupMe, Email, Reddit, Chegg, Zoom chat, etc. is considered a violation of the student code and appropriate penalties will be enforced.

Students who are caught fabricating data will lose 1 point from their Lab Report on their first offense and may prevent the student from earning any points on the Bonus Assignment. Subsequent offenses will prevent the student from earning any points on the Bonus Assignment.

The course administrators will use all available tools to track abnormal matches between answers submitted. For example, certain data points in a plot may be considered plagiarized even if the values are numerically ‘tweaked’ yet with a matching ‘trend’. Students are cautioned in the strongest terms, as the ability to establish potential plagiarism has vastly improved with new tools even when the source is typically presumed ‘untraceable’ electronically. Examples include handwritten notes and documents that exist only in image form.

The university policy on plagiarism can be found in the student code (<https://studentcode.illinois.edu/>). The penalty for violation of academic integrity rules in a single assignment, fully or partially, is a failing grade for the entire course. Assisting plagiarism also carries the same penalty. Keeping student login information secure is the student’s responsibility. Therefore, allowing access to your information is also assisting plagiarism.

Violations are not limited to online submission systems. Any member of the faculty, the Lab Director, the teaching Lab staff, teaching assistants, students or other Department staff members have the authority to bring potential violations to the attention of the Course Coordinator. The Course Coordinator reserves the right to use such evidence, personal observations, and available tools to determine whether a violation has occurred before proceeding into an official inquiry process.

There are too many students and too many sections to allow students to switch sections; that is, you must attend

the section in which you are enrolled (for an excused absence, see “Attendance for the Course”). Do NOT go to a different section and then submit your data during your scheduled time. You will not be counted as being present in the lab session, and if data is found to have been entered, it will be considered to be fabricated. Such violations will result in appropriate penalties.

If a student is found to have committed an act of Academic Dishonesty, as outlined in any number of instances explained throughout this document, the student will not be eligible to complete the Bonus Assignment at the end of the semester for points.

REQUIRED MATERIALS FOR THE COURSE

You are required to purchase the following for Chemistry 105:

Lab Coat

A Lab coat can be purchased at any of the campus bookstores. Note: students are permitted to purchase and wear either the standard white lab coat or the blue, fire-resistant, lab coat. It is recommended that students who plan to take upper-level (200-level and above) lab courses purchase the blue, fire-resistant, Lab coats since this is the coat that will be required for those upper-level lab courses.

Goggles

All students, teaching assistants, and visitors in the laboratory must wear regulation safety goggles as required by STATE LAW. You must wear goggles at all times in the laboratory or you will be asked to leave immediately and will receive a zero for the lab assignments (Report, PostLab, Lab Cleanliness) that day.

The approved goggles for Chemistry 105 is: Honeywell UVEX Stealth OTG safety goggles. Other models of goggles are not permitted in the lab space. Questions regarding goggles should be directed to the Lab Director (3015 Chemistry Annex, sdesmond@illinois.edu). Goggles can be purchased at any of the campus bookstores or online.

It is strongly advised that you do not wear contacts while in the laboratory. They readily absorb vapors from solvents that are detrimental to the eye. Safety goggles are not “air tight” and therefore do not completely eliminate this absorption. If you choose to wear contacts in the laboratory, you must notify your TA and wear a “*CONTACTS*” badge on your Lab coat each week.

Chemistry 105 Laboratory Manual “General Chemistry Experiments”

The Lab manual is provided digitally in Labflow. Students cannot use an old version of this manual this semester, as the course has been redesigned to include new experiments and policies.

Chemistry 105 Report Pages and Printed Experiment Procedures

Students will be provided with a packet of printed copies of the Report Pages and the Experiment Procedures.

Students must purchase and register for Labflow before picking up their packet. The packet will be provided to student during Lab 0. This information is also located on Labflow. Students are encouraged to review the materials here to prepare for Lab 0.

ATTENDANCE FOR THE COURSE

Students are required to attend all in-person Lab sessions.

You must attend the section in which you are enrolled. Students are not permitted to attend another section for any reason.

Students must arrive to the lab space by the 5 minute mark, when the TA's PreLab instruction begins, in order to attend lab. Failure to be present during the entire presentation of this important information may result in an unsafe situation for the student or their labmates; therefore, late arrival to the lab space (as defined as after the 5-minute mark) is not permitted. Students who arrive too late to attend Lab are not eligible for provisional data and will receive a zero for the missed assignments (Lab Report, PostLab Assignment, Cleanliness points).

Documentation to support why a missed Lab must be excused must be submitted as soon as possible after that scheduled Lab has been missed by that student, and no later than 12 hours before that Lab's PostLab Assignment deadline. Documentation received after this deadline will not be accepted.

NOTE: Any student who misses more than 3 in-person Lab sessions (excused or unexcused) during the semester will automatically fail the course or receive an incomplete grade for the course even if required reasonable excuse letters have been provided.

All absences will be considered unexcused except in the following cases:

1. **Medical excuse.** You must provide documentation of a visit with a medical practitioner dated within 3 business days of the missed Lab to chem-105@illinois.edu. "Dial-a-Nurse" is not an acceptable medical visit. This information should NOT be given to your TA.

If you are sick and unable to attend your assigned in-person lab session, please email the Course Assistant at chem-105@illinois.edu as soon as possible.

Note, COVID-19 falls under the "Medical Excuse" portion of this document and requires documentation of a visit with a medical practitioner or documentation of a positive COVID-19 test from a medical facility. Images of a positive home test are not accepted.

2. **Family emergency.** If you cannot attend class because of an unexpected emergency you must provide

documentation from the Emergency Dean to **chem-105@illinois.edu**. This information should NOT be given to your TA.

If you miss a Lab due to an emergency, please email the Course Assistant at **chem-105@illinois.edu** as soon as possible.

3. **Participation in a University-sponsored activity.** Examples include participation in the Marching Illini or a University sports team. You must provide documentation regarding your absence to **chem-105@illinois.edu** at least one week prior to your absence. This information should NOT be given to your TA. Intramurals, student-sponsored clubs and activities, or registered student organization (SRO) events are not considered University-sponsored and do not excuse you from a missed lab session.

MANDATORY I-CARD SCANNING POLICY AND PROCEDURE

The Department of Chemistry requires that students scan their official University of Illinois i-card/UIN card upon arrival to the lab space. Scanning must occur within the first 5 minutes of the lab period. Successful and on-time scanning of the student's i-card will earn the student two Scan-In Points each week of the semester. If a student forgets to scan their card, arrives late, or does not have their i-card/UIN card with them, then they will not receive the two Scan-In Points; however, they may still attend lab. This policy applies to all students enrolled in Chemistry 105.

Listed below are frequently asked questions regarding this policy.

Why do students need their official University of Illinois i-card/UIN card?

Scanning of official University of Illinois i-card is required for safety and will ensure the student attends the lab section for which they are registered.

When does the scanning of the card occur?

Each lab space contains an i-card scanning station. Students will scan their card immediately upon arriving to their Chemistry 105 lab space. All scanning must occur within the first 5 minutes of the lab period, for example by 8:05:01AM for a lab session that begins at 8:00AM.

What happens if a student does not scan their card by 5 minutes after the start of lab period?

Students must scan their card no later than 5 minutes after the start of the lab period. Any student that scans their card after this time, or fails to scan their card at all, will receive zero Scan-In Points for that lab session.

For example, a student is registered for the Tuesday 8:00AM lab session. This student must scan their official University of Illinois i-card by 8:05:00AM. If the student scans their card at 8:05:01AM, their scan will be considered late and they will receive zero Scan-In Points for that week of Lab.

What will happen if a student forgets their i-card or has a temporary ID?

A temporary ID card cannot be used instead of an i-card to check into the Lab.

The student should report directly to the General Chemistry Main office (1026 Chemistry Annex) to report that they forgot their i-card.

Please note, this option does not change or extend the time by which the student must arrive to the lab space. Arrival to the lab space must still occur before the 5-minute mark of the lab period. Students will not be provided with an i-card pass if they arrive to the Main Office after the 5-minute mark of their lab session.

For this option, the Office Manager or the Office Support Associate will record the following information: student name, NetID, Section Number and verify that this is the first time the student has tried to attend Lab without their card. The student will receive a pink slip that is to be given to their TA, stating they may attend the Lab without their i-card this ONE TIME. **This allowance will only be made one time per student per semester.**

If the student chooses this method, they will not be permitted to begin work on the experiment until their TA has received the pink slip from the Main Office, indication whether or not the student has been approved to attend the Lab and receive credit for the experiment, for this one and only time, without their i-card. Students must be aware of the time of the PreLab instruction and ensure they are in the lab space for this important information. Failure to be in attendance for this instruction will prevent the student from attending the Lab per the course attendance policy.

All subsequent instances when the student reports their card as misplaced, lost or stolen, will result in the student receiving zero points for i-card scanning for that lab period. It is the responsibility of the student to go to the Illini

Union Bookstore and replace their i-card before trying to gain access to the lab space again. Student must present their new official University of Illinois i-card the next time they attempt to access the lab space.

What will happen if a student misplaces, loses or has had their i-card stolen?

The student should report directly to the General Chemistry Main Office (1026 Chemistry Annex) to report that they misplaced, lost or had their card stolen. The Office Manager or the Office Support Associate will record the following information: student name, NetID, Section Number and verify that this is the first time the student has tried to attend the Lab without their card. The student will receive a pink slip that is to be given to their TA, stating they may attend the Lab without their i-card this ONE TIME. **This allowance will only be made one time per student per semester.** Students must be aware of the time of the PreLab instruction and ensure they are in the lab space for this important information. Failure to be in attendance for this instruction will prevent the student from attending the lab period per the course attendance policy.

Please note, this option does not change or extend the time by which the student must arrive to the lab space. Arrival to the lab space must still occur before the 5-minute mark of the lab period. Students will not be provided with an i-card pass if they arrive to the Main Office after the 5-minute mark of their lab session.

All subsequent instances when the student reports their card as misplaced, lost or stolen, will result in the student receiving zero i-card scanning points for that lab period. It is the responsibility of the student to go to the Illini Union Bookstore and replace their i-card before trying to gain access to the lab space again. Student must present their new official University of Illinois i-card the next time they attempt to access the lab space.

GRADING FOR THE COURSE

Please note: Chemistry 105 follows the University plus/minus system for grading. The grading for the course will be as follows:

Course Policy Assignment	10 pts
Safety Quiz	10 pts
Practice Report with Provisional Data	10 pts
10 PreLab Assignments	100 pts
(Lab 0 does not have a PreLab. Lab 10 contains a Presurvey completed in the lab and is not included here)	
11 Lab Reports/PostLab Assignments	330 pts
(Each Lab Report = 8 points for data entry + 1 point for handwritten, on paper, Report Sheet + 1 point for handwritten TA initials on the Report Sheet + 20 Points for the PostLab Assignment)	
(Lab 0 contains the Scavenger Hunt + Waste Disposal Assignment; each worth 5 points and is equal to a Lab Report. Lab 6 does not have a PostLab Assignment and is not included here.)	
10 Lab Cleanliness Points (up to 1 point each)	10 pts
(Lab 0 and 6 do not have Cleanliness Points)	
12 "Scan-In" Points (2 points per Lab)	22 pts
(Lab 0 does not have "Scan-In" Points)	
Lab 6 Determining the pKa of an Acid	10 pts
Lab 10 Pre-Survey (completed in the lab)	10 pts
Total.....	512 pts

Bonus Assignment – up to 30 points possible

This course is not curved (i.e. 70.0–72.9% is a C–, 73.0–76.9% is a C, 77.0–79.9% is a C+, 80.0–82.9% is a B–, 83.0–86.9% is a B, 87.0–89.9% is a B+, 90.0–92.9% is an A–, and 93.0–100% is an A).

Grading Scheme for Chem 105:

Percentage %	Final Grade
(97.0–100.0%)	A+
(93.0–96.9%)	A
(90.0–92.9%)	A–
(87.0–89.9%)	B+
(83.0–86.9%)	B
(80.0–82.9%)	B–
(77.0–79.9%)	C+
(73.0–76.9%)	C
(70.0–72.9%)	C–
(67.0–69.9%)	D+
(63.0–66.9%)	D
(60.0–62.9%)	D–
(0.0–59.9%)	F

OTHER IMPORTANT COURSE INFORMATION ITEMS

Medical Insurance

Each student at the University is responsible for providing their own medical insurance coverage. If a student is injured or becomes ill during laboratory, costs of transportation and treatment are the responsibility of the student. Check to be sure that your insurance coverage is adequate.

Contact Information

If you have any questions or concerns throughout the semester, you should contact the Course Coordinator or Lab Director. The contact information is included online.

THE REPORT PAGES

The current Chemistry 105 Laboratory Manual is located, digitally, in Labflow. Changes are made to the manual each semester, preventing students from using old versions.

Students will be provided with a printed packet of all Experimental Procedures and Report Pages. Students are required to bring these with them to the lab space each week. They will record their data, by hand, in the provided tables on the Report Pages. Students are not permitted to record data digitally into a pdf on their personal device. In some instances, there will also be squares in which they should show their work for calculations. Misplaced or forgotten packets will not be replaced by the Department of Chemistry. If a student loses their Report Pages

or Procedures, then they will be responsible for printing their own copy from Labflow and will incur any costs associated with this process.

Report Pages are considered legal documents and evidence of the work completed by the individual student during their scheduled lab section. For this reason, pencil may not be used under any circumstances. If the student makes an error, they should put a single line through it (do not scratch it out, use white out or completely cover it in any way), place their initials above the line and write the new number or text beside it. Failure to follow these instructions may result in a loss of Report points.

Students will take an image of their Report Page, after their TA has initialed it (by hand), and will upload this document to their electronic Labflow Report. Late Report pages will not be accepted.
